V.5.3 Ambiguous Terms for Extent of Disease

- ✓ Added the following paragraph after the description of ambiguous terms for extent of disease:

As a general rule, the first and foremost resource for a registrar for questionable cases would be to contact the provider who diagnosed and/or staged the tumor. If the provider is not available, the medical record and any other pertinent reports should be read closely to determine required information. The Ambiguous Terminology list in FORDS and the SEER Summary Stage 2000 manual should be used as a guideline for cases where the wording in the patient record is ambiguous with respect to reportability or tumor spread and there is NO further information available from any

source. Do not refer to the Ambiguous Terminology list(s) when there is a clear statement of malignancy or tumor spread. Registrars should only rely on Ambiguous Terminology lists when the information is not clear and the case cannot be discussed with the appropriate provider/pathologist.
